PROFESSIONAL SUMMARY

Full-Stack & Cloud Developer with 2+ years of experience optimising and stabilising production web applications and AWS systems. Skilled in codebase reviews, bug resolution, security hardening, database optimisation, and scalability improvements. Proficient in React, Node.js, TypeScript, Python, SQL, and serverless AWS architecture, with a strong focus on performance, reliability, and UI refinement.

TECHNICAL SKILLS

Languages:

JavaScript (React, Node.js, Express, TypeScript), Python, SQL, HTML5, CSS3

Frontend & UI Optimisation:

React performance tuning, component refactoring, state management, responsive design, UI consistency, cross-browser debugging

Backend & APIs:

RESTful APIs, Express.js, Serverless Architecture, Authentication (JWT, AWS Cognito), API security, error handling, workflow stabilisation

Database & Performance:

PostgreSQL, MySQL, DynamoDB

Query optimisation, indexing strategies, schema refinement, JOINS, performance tuning

Cloud & Infrastructure (AWS):

Lambda, API Gateway, RDS, DynamoDB, S3

IAM, VPC, CORS configuration, security hardening

Terraform (Infrastructure as Code)

GitHub Actions (CI/CD)

System Improvement:

Codebase review, bug identification, performance optimisation, scalability improvements

PROFESSIONAL EXPERIENCE

Full-Stack & Cloud Developer

CAPACITI

Oct 2025 – Present

- Reviewed and assessed existing codebases to identify bugs, inefficient logic, and architectural weaknesses.
 - Diagnosed and resolved API failures, authentication misconfigurations, and CORS security gaps in AWS serverless environments (Lambda, API Gateway).
 - Improved database structure and performance (PostgreSQL, MySQL) through query optimisation, indexing strategies, and schema refinement.
 - Refactored backend services to enhance error handling, logging, and overall workflow reliability.
 - Stabilised incomplete and inconsistent application workflows by debugging asynchronous processes and resolving state management issues.
 - Optimised React components to improve UI responsiveness and reduce unnecessary re-renders.
 - Implemented CI/CD pipelines (GitHub Actions) to reduce deployment errors and improve release stability.
 - Applied Terraform to standardise infrastructure and eliminate environment inconsistencies.
-

Web Developer

Talent Match Africa

Sep 2024 – Sep 2025

- Reviewed and debugged front-end codebases to resolve 20+ layout, rendering, and cross-browser compatibility issues.
 - Improved system reliability by 25% through structured debugging and performance optimisation.
 - Reduced bug resolution time by 35% by implementing systematic testing and issue tracking.
 - Refactored reusable UI components to improve maintainability and delivery efficiency (15% faster turnaround).
 - Assisted in stabilising incomplete client workflows and resolving integration inconsistencies.
 - Collaborated in Agile sprints to assess and improve application functionality before deployment.
-

KEY ACHIEVEMENTS

- Conducted codebase reviews to identify bugs, performance bottlenecks, and architectural weaknesses
 - Improved database performance through query optimisation, indexing, and schema refinement
 - Identified and resolved security gaps in APIs and cloud configurations
 - Stabilised application workflows by improving error handling and reducing deployment failures
 - Enhanced UI responsiveness and cross-browser consistency through component refactoring
 - Improved system scalability and reliability across AWS-based environments
-

CERTIFICATIONS

- Architecting Solutions on AWS
- DevOps on AWS: Code, Build, and Test
- AWS Cloud Practitioner Essentials
- The Complete JavaScript Course
